PROFILE SUMMARY

AI and Full Stack Engineer with 5+ years across Fortune 500 and freelance roles, building agentic systems, LLM-powered automation, and multi-agent workflows end to end. Designs RAG pipelines, tool-using agents, and AI-assisted developer tooling on Azure, backed by strong software, CI/CD, and observability fundamentals. Fluent in TypeScript, JavaScript, Python, OpenAI and Claude models, and modern agent frameworks (LangChain, LangGraph, MCP).

TECHNICAL SKILLS

AI & Agentic Systems: LLM application development (OpenAI GPT-4/4o/5.x, Anthropic Claude), agent frameworks (LangChain, LangGraph, CrewAI, AutoGen, OpenAI Agents SDK), Model Context Protocol (MCP), tool use & API orchestration, multi-agent workflows, RAG, embeddings & vector search, prompt engineering, agent evals & observability

AI Tooling & Multimodal: Cursor, Claude Code, GitHub Copilot, Microsoft 365 Copilot, n8n automation, Hugging Face Transformers, Stable Diffusion, Whisper

Programming Languages: TypeScript, JavaScript (ES6+), Python, Bash, SQL, HTML5, CSS3

Web & App Development: Node.js, Express, React, Redux, Next.js, React Native, RESTful APIs, GraphQL

Cloud & DevOps: Microsoft Azure, Azure DevOps, CI/CD Pipelines, Docker, Kubernetes, GitHub Actions, Jenkins

Data & Storage: MySQL, MongoDB, Redis, SQL, Azure Synapse, Microsoft Fabric, vector databases

Observability & Quality: Dynatrace, SonarQube, JMeter, Jest, Mocha, Postman, code reviews

Security & Best Practices: OWASP Top 10, secure coding (authN/authZ, input validation, injection prevention), prompt-injection awareness, DevSecOps integration, code audits

Collaboration & Methodologies: Git, Jira, Smartsheet, Agile/Scrum, CI/CD, microservices architecture

EXPERIENCE

Software Engineer Chicago, IL

Walgreens 06/2022 - Present

- Designed and shipped LLM-powered chatbots and internal copilots (OpenAI GPT-4, Microsoft Copilot) with retrieval-augmented generation over enterprise knowledge, automating support, content, and voice workflows.
- Built agentic backend automations and multi-step AI workflows using tool use and API orchestration, reducing manual operations and scaling developer productivity across teams.
- Developed AI-assisted developer tooling and Copilot-driven scripts (report generators, custom JMeter UI) that cut repetitive engineering effort and accelerated delivery.
- Architected and shipped a full-stack SSL/TLS certificate lifecycle automation platform on Azure with automated CI/CD in Azure DevOps, cutting release cycles by ~35% and automating ~90% of manual renewal effort.
- Implemented SonarQube Enterprise with automated onboarding via Azure Pipelines and executive code-quality dashboards, improving code quality metrics by ~40% across multiple teams.
- Built Python data and telemetry pipelines from Azure and Dynatrace into Azure Synapse, Microsoft Fabric, and Power BI, enabling org-wide analytics and monitoring.
- Authored detailed After Action Reports for high-severity production incidents, partnering with application, operations, and security teams to identify root cause and implement preventative measures.
- Resolved critical performance bottlenecks and Redis caching issues, stabilizing high-traffic applications and reducing downtime, while collaborating with product, UX, and QA in Agile teams.

Automation Engineer Des Plaines, IL
Americaneagle.com 09/2019 - 06/2022

- Built and maintained Cypress and Selenium automation frameworks in JavaScript/TypeScript, integrated into Azure DevOps CI/CD pipelines to reduce manual QA and enable continuous regression and cross-browser testing.
- Designed and executed automated UI, API, and functional test suites from business requirements, increasing coverage and lowering regression defects.
- Performed multi-browser (Chrome, Firefox, Edge, Safari) and RESTful API validation plus SQL-based backend data checks, ensuring end-to-end accuracy.
- Wrote unit tests with Mocha and Jest to catch issues earlier in the delivery lifecycle and improve code quality.
- Collaborated with developers and product owners in Agile/Scrum teams, using Jira for defect tracking and release prioritization.

Full Stack Developer Remote
Upwork (Freelance, Remote) 07/2020 - 06/2022

- Delivered end-to-end web apps for global clients: responsive UIs (HTML/CSS/JS/jQuery) and scalable Node.js/Express backends with RESTful APIs and reusable integration modules.
- Integrated OpenAI GPT models and other AI APIs (text, image, voice) into client products, enabling smart chat interfaces, content generation, and interactive experiences.
- Designed MySQL and MongoDB schemas with optimized queries, improving reliability and cutting response times by up to ~40%.
- Implemented security best practices (authN/authZ, input validation, SQL injection prevention, OWASP Top 10) and reduced page load times from 7+ seconds to under 2 seconds via async JS, caching, and query optimization.

TECHNICAL PROJECTS

Agentic Workflow Builder github.com/mohmedvaid/workflow-builder
Builder for autonomous multi-step task execution and AI-powered pipeline orchestration across tools and services.

Algorithm Visualizer github.com/mohmedvaid/algo-visualizer
Interactive visualizer for classic algorithms and data structures to aid learning and interview prep.

EDUCATION

Certificate in Full Stack Web Development 01/2021 - 07/2022
Northwestern University, Evanston, IL

Bachelor of Computer Science 06/2017 - 12/2021
Northeastern Illinois University, Chicago, IL
